Adding a YouTube Video to your Divi Website (page).

Upload video to YouTube - You can get instructions for this elsewhere or follow the onscreen prompts over at YouTube - **Video must be uploaded to YouTube** to go on your website - Please don't upload it to the back end of your website (Media Library) under any circumstance.

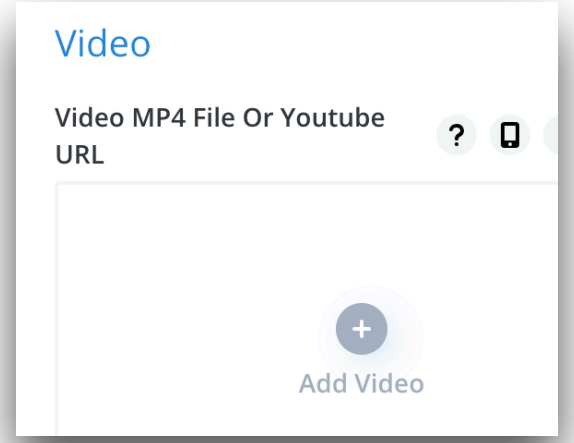

Navigate to your Video on YouTube - Once you can see it on the page, click on Share. You'll see that there is a code in the bottom box - Click on the **Copy** button.

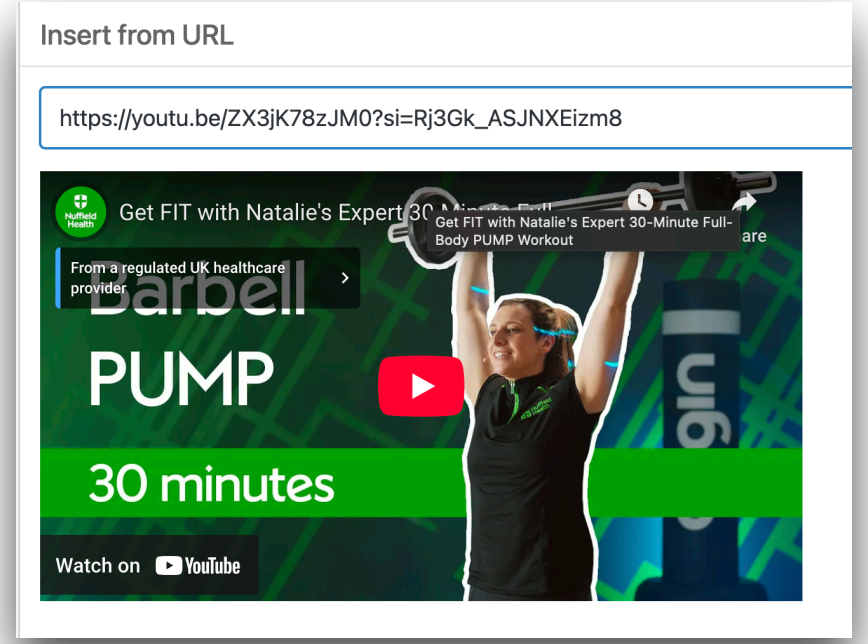

Go over to your Website - Logged in as normal and open the **Enable Visual Builder** on your Page (you're working on). Scroll down to where you want to put the video. Underneath any of the existing Modules **(Grey)**, please click on the + button and then type in Video.

Click on Video (this is the right Module) - Then click the white trash can to get rid of the example. Click the white on light grey **Add Video**. And Insert from URL.

Again, please don't upload anything to your website.

Paste in the YouTube link - And Insert into Post. Scroll down a bit and drop down the Overlay arrow. Click on the Grey "Generate from Video". Click on the **Green Tick**.

Purple Circle - And **Save** as normal. Exit Visual Builder.
